

# THE ABC'S OF VACCINES

## BOUGHT

Pharmaceutical companies hire powerful lobbyists to influence Congress and **also** donate millions of dollars to politicians, doctors and researchers

## FACT

The current CDC Vaccine schedule has **NEVER** been tested for safety

## GARDASIL

While the HPV vaccine Gardasil is facing bans by countries in the EU, India and Japan due to multiple deaths and injuries, it is being fast tracked to *mandatory* injection in the United States

## IMMUNITY

Vaccines do not provide full immunity. The **only** way to receive lifelong immunity from measles or chicken-pox is to have the disease. Risk of disease side effects are far less than from corresponding vaccines

## Japan

After pushing their minimum vaccine age to 2 years old, Japan's SIDS rate decreased by 90%

## MEDICAL RISK

After cancer and heart disease, the 3rd leading cause of death in the US is from adverse effects resulting from medical procedures. Many people believe that with the possibility of risk should come choice

## ADVERSE EFFECTS

Patients are rarely warned in advance of possible adverse side effects and risks from vaccines including long-term seizures, bleeding disorders, chronic ear infections, deafness, encephalitis, learning disorders, Transverse Myelitis, brain damage, Guillain-Barre Syndrome, asthma, Autism, coma, death, etc.

## Congress

After a landslide of death and disability lawsuits, Congress granted Merck, Wyeth and other vaccine manufacturers complete immunity from all injury liability

## DOSES

In 1983, children received **10** doses of vaccines. In 2015, they receive **69**. There are currently **300** vaccines in development and can be added to the CDC schedule at any time

## EFFECTIVENESS

Over 50% of recent measles cases were in fully vaccinated people. Over 90% of Whooping Cough cases in 2014 were in fully vaccinated people

## HOSTILE ENVIRONMENT

Parents who choose not to vaccinate their healthy children on the CDC schedule are being forced out of pediatric practices

## KINDERGARTEN

SB277 has been signed in to law and means that missing even one dose of one vaccine would result in a child being unable to attend school

## LAWSUIT

Although private citizens are prevented from suing pharmaceutical companies, two of Merck's own scientists filed a lawsuit against the company for making fraudulent claims about MMR's effectiveness

The National Vaccine Immunization Compensation Program is a government program, funded by taxes on vaccines, set up to compensate families whose children die or are severely injured

Why aren't there safer vaccines on the market? Why are neurotoxins and carcinogens still being used as adjuvants? Why are we injecting chemicals into our children that are not recommended for consumption?

Many people do not correlate dangerous reactions to vaccines. Some Doctors have called even cases of organ failure in children after multiple injections a coincidence

The MTHFR gene has been shown to cause a pre-disposition to adverse effects of vaccines but the medical community still does not demand testing to determine which children are at risk

After 7 years as head of the CDC, Julie Gerberding took her government policy experience and accepted a position with Merck as President of their Vaccine Division, a program with unlimited growth potential for its shareholders

In the state of California, you have just lost your right to choose what is injected in to your child. Any vaccine can be added to the untested CDC list at any time. Are you willing to make your child part of this experiment?

The NVICP 'Vaccine Court' has paid out over \$3 Billion for vaccine injuries. Parents often have to wait years to plead their case in front of an appointed "master" of the court. There is no judge, no jury and no witnesses are allowed

The US has the most aggressive vaccine schedule globally and also has the highest rates of childhood illness including Leukemia, learning disabilities, asthma, autism and SIDS

A dangerous cocktail of additives including Aluminum (shown to cause brain and bone diseases in children and Alzheimer's in adults), MSG, E. coli, formaldehyde, EDTA, detergent, alcohol, ammonium, polysorbate 80 and many others are injected into the bloodstream, making each additive far more dangerous than oral ingestion

Senator Richard Pan, lead author of SB 277 in California, has received \$95,000 personally from pharmaceutical companies in addition to millions of dollars in campaign funds

Although the CDC claims that there are only trace amounts of mercury remaining in vaccines, multi dose vials of influenza and meningococcal still contain many times over the amount considered safe for human exposure – and are controversially recommended for pregnant women and children

Lead researcher Bill Thompson from the CDC confessed to concealing data revealing a 340% increase in autism risk to African American boys

Scientists estimate 6 out of 10 diseases are passed to humans from animals. In 1961 researchers discovered a monkey virus being transferred to recipients and causing cancer. Animal cells currently used in vaccines come from cows, dogs, monkeys, mice, chickens and armyworms and have not been tested for long term effects on people
